BECsnapVG
all for one – one for all

BECsnapVG
all for one

The quick-tensioning solutions for all purposes

Surely the best choice for optimized handling of SMT stencils: BECsnapVG
The new, patented quick-tensioning solution from BECKTRONIC designed to make
PCB manufacturers everyday production easier, more economical and safer.

BECsnapVG can be used in standard quick-tensioning frames and offers the
possibility of converting traditional quick-tensioning stencil types to the new system.
The solution, which does not require an insertion aid, is convincing by its high safety
and stability as well as simple handling.

What this means for you:

- Significantly improved stability of the stencil
  by means of aluminium mouldings
- Simplified handling
- Faster loading time and longer life of the stencil
- Retrofitting of traditional quick-tensioning stencils
  to BECsnap as an economic solution: safe
  handling without re-production of the stencil
- No risk of injury due to sharp edges

- Longer durability of the storage bags
- Stencil available in all thicknesses
  (70 µm to 500 µm)
- Short standard delivery time of 1 day,
  free express service (4 hours)
- Also available as surface-treated stencil
  (BECchem and nano-coated)

BECsnapVG
one for all

BECsnapVG allows the reuse of existing SMT stencils while at the same time considerably simplifying handling. This is a cost saving solution, since the stencils do not have to be re-manufactured. The durable aluminium mouldings increase the stability of the stencil, minimize the risk of injury caused by sharp edges, and enable safe and yet space-saving storage of the stencil. This is also an ideal alternative for new stencils, since BECsnapVG is economically implementable.

BECKTRONIC offers quick-tensioning frames, which may be used with both retrofitted stencils as well as new BECsnapVG stencils.

Can be used in the following quick-tensioning frames:

VectorGuard® VG260, 23" x 23"
VectorGuard® VG260
"High Tension", 23" x 23"
Alpha® Tetra™, 23" x 23"
MicroMount/VectorFrame
V260 VG CONV

Convertible quick-tensioning stencil types:

QuattroFlex/Stencilman,
555.5 x 555.5 mm
MicroMount, 558 x 558 mm
Alpha®Tetra™, 558 x 558 mm
BEC100, 558 x 558 mm

Compatible with the following stencils:

VectorGuard® VG260
Alpha®TetraBond™

BECKTRONIC - comprehensive advice and short delivery times

Standard delivery times of one day – no additional fee or express surcharge

Free 4 hours express service – for quick-tensioning and prototype stencils
(for orders received before 3 pm)
